Summary

Software Engineer with a product mindset who designs and ships scalable, maintainable systems end to end, from **backend architecture** and **system design** to user-facing delivery, serving **10k+ users**. Builds **RESTful APIs**, real-time systems, and distributed **microservices** with clean architecture, sound database design, and a security-first mindset.

Work Experience

Full Stack Engineer *May 2026 – Present*

I-Fikra

- Designed and delivered the **backend architecture** of three production platforms **Alexandria Port**, **Lady Driver** (women-only ride-hailing), and a **Medical Platform** – serving **10k+ users**: services split by domain, **gRPC** for service-to-service calls, **RabbitMQ** for async events, and **Socket.IO** for client real-time, following **clean architecture** for scalability and maintainability.
- Built **RESTful APIs** and real-time features (chat, notifications, live tracking) with **NestJS**, integrated with **React**, **Next.js**, and **Angular**.
- Designed database structures across **PostgreSQL**, **SQL Server**, **MongoDB**, and **Redis**, matching each store to its access pattern (relational data, documents, caching) while preserving data integrity.
- Applied secure coding (**authentication**, **authorization**), owned production deployment and troubleshooting, and cut patient waiting time on the medical platform via online booking and real-time communication.

Education

Java Spring Boot – Route Academy *Jul 2026 – Present*

Open Source Applications Developer (NTI) *Jan 2026 – Apr 2026*

- **540 hours** of intensive full-stack training; built **10+ projects**.

Faculty of Engineering, Alexandria University *Sep 2020 – Jun 2025*

B.Sc. in Communication and Electronics Engineering

Skills

Technical Skills

- **Frontend:** React, Next.js, Angular, Vue, TypeScript, Tailwind, Redux, Zustand, TanStack Query, i18n
- **Backend:** Node.js, Express.js, NestJS, Java Spring Boot, Java Security, REST, RESTful APIs, OpenAPI, GraphQL, gRPC, Socket.IO, RabbitMQ, Microservices, JWT, OAuth, RBAC, Asynchronous Programming, Third-Party API Integration
- **Database:** PostgreSQL, SQL Server, MySQL, MongoDB, Redis, Oracle, Database Design
- **Architecture:** System Design, Clean Architecture, SOLID, Design Patterns, Event-Driven Design, API Design
- **Tools and Testing:** Git, GitHub, Docker, CI/CD, GitHub Actions, Postman, Unit and Integration Testing, Jest, Cypress, Figma, IntelliJ
- **Others:** Data Structures and Algorithms, OOP, Python, C/C++

Languages: Arabic, English

Projects

FORGE Strength Club – Gym Platform (Full Stack) *gym* *Oct 2026*

- Building a gym platform (member portal, class booking, **Stripe** billing) on **Express 5**, **MongoDB**, and **Next.js**, with an **OpenAPI** contract checked in **CI**, **Docker** infrastructure, and unit and integration tests.

MedFlow Clinic Platform (Full Stack) *Frontend* | *Backend* *Sep 2026*

- Built a full-stack clinic platform featuring appointment booking, role-based dashboards, and real-time patient–doctor chat, reducing average booking wait time from 3+ hours to under 10 minutes.

E-Commerce Platform – Full Stack *Ecommerce* *Jun 2026*

- Architected a multi-tenant e-commerce platform as three independently deployable services, owning security, **Stripe** payment integration, and EN/FR/AR localization end to end – validated by 100+ automated tests.

Library Management System – Full Stack *Alex-Library* *May 2026*

- Shipped a production-deployed library platform (API, admin dashboard, storefront) with role-based authentication and real-time borrow/return tracking.
